### **American Solar Electric Expands Operations; Announces Hiring Plans**

(Scottsdale, AZ) - As the market for photovoltaic power systems grows in Arizona, so is one of its largest specialty contractors. Today, American Solar Electric, Inc., with headquarters located in Scottsdale, Arizona, announced it is moving the construction division of its operations to a 35,000 square foot facility in nearby Tempe. The move comes as the company is seeing unprecedented demand for its systems and installation services.

In addition to the new facility, the company is also planning to hire up to ten new employees, with the majority of the new hires being sourced from the specialty building trades.

Sean Seitz, President of American Solar Electric, suggests the moves are part of the company's on-going growth strategy: "We have experienced year-to-year sales increases of over 100% in each of the past three years. To address this fast-growing market we have invested heavily in our staff and service capabilities. The addition of the Tempe Service Center provides our company the space required to continue its growth and strengthens our ability to service customers."

Seitz continued, "The addition of new staff is exciting. As demand increases rapidly for solar power in Arizona, we must respond by adding new employees to address all facets of our operation. This round of hiring will fill vacancies in several departments including construction, sales, administration and management."

**American Solar Electric, Inc.** is a Scottsdale-based design-build firm specializing in photovoltaic (solar electric) power systems for commercial, industrial and residential applications. The company offers complete design services and is licensed, bonded and insured for both commercial and residential electrical contracting in the State of Arizona (AZ ROC License #168657).
